

## We offer a new standard of underwater inspection for your assets!

Omexom Offshore has a long track record in the offshore wind industry as project developer, operator and solution provider. We now provide perfectly customized underwater inspections by using a MiniROV – an easily handled remotely-controlled inspection vehicle with modular design. Equipped with sonar, DVL and a high-resolution camera, excellent image data results are ensured.

**Schedule your underwater inspection independently from any DP-vessel and profit from flexibility and reduced inspection time!**

## MiniROV Inspection

- Scour & seabed inspection
- Investigating critical components like anodes or cables
- Examination of structural components (internal and external)
- Monitoring of environmental factors like marine growth etc.
- Verification of already collected data or CMS indications
- Transport via CTV & handling possible with only two persons
- No DP vessel needed for operation
- SIMOPS possible
