

We bring rotor blade service to the next level!

Omexom Offshore has several years of experience as project developer, operator and solution provider for offshore windfarms. We are now offering drone inspections of rotor blades using artificial intelligence to support the evaluation. By combining these with our vast technical expertise, we bring the ultimate all-in-one solution for our customers and offer:

- Recurrent inspection
- Damage assessment
- Inspection of whole windfarms or specific turbines
- ... and more!

The equivalency of our solution with rope-access inspections was confirmed by an independent certification body.

Benefit now from the increased earnings of reduced downtime and closer insights into your asset!

OBSERVAERO by Omexom

- State-of-the-art drone technology
- Damage-identification with support of AI
- User-friendly image management platform
- Comprehensive rotor blade expertise
- DAkkS-accredited conformity evaluation (inspection body acc. ISO 17020)
